

Kraftwerks November 2025 Newsletter

Designing and creating great installations isn’t enough. They also need to be completed within budget and on time, and Kraftwerks did just that with Van Bortel Subaru’s new service department.

Featured Case Study Van Bortel Subaru

Today’s automotive workstations are more than just workspace and tool storage. They need:

- Technology accommodations (e.g., data ports, compressed air, power access, space for laptops, screens, etc.),
- Customized storage compartments for specific tools/equipment,
- Modular, flexible units that can easily be moved and reconfigured as needed, and
- Have a professional, clean look.

Van Bortel wanted to improve the quality and look of the service department in their new facility. They wanted everything to be 1st class—for their customers *and* their service technicians.

Kraftwerks did their research, working with staff, construction managers, and vendors to create an installation that met and exceeded the needs of Van Bortel.

The resulting application was aesthetically attractive and highly functional—plus it was versatile and made to last. Kraftwerks completed the work early, enabling Van Bortel to open the facility a mere ten days after completion.
